

What is software?

Software is a set of instructions, data or programs used to operate computers and execute specific tasks. Software is a generic term used to refer to applications, scripts and programs that run on a device.

What is mobile application?

A mobile app is a software application developed specifically for use on small, wireless computing devices, such as smartphones and tablets, rather than desktop or laptop computers.

Difference between mobile application and web application

<u>Mobile application</u>	<u>Web application</u>
Mobile apps are developed for a specific platform, such as iOS for the Apple iPhone or Android	Web Apps are accessed via the internet browser and will function according to the device you're viewing them on
They are downloaded and installed via an app store such as Google Play Store and Apple Store	Web apps are not native to a particular system and there is no need to be downloaded or installed.
Mobile apps may work offline.	In order to run web apps need an active internet connection.
Mobile apps are comparatively faster than web applications.	Web applications are comparatively slower.
